## Parkinson's Disease Therapy <br> Results

A total of 75 patients underwent the Parkinson's disease Stem Cells Therapy and out of which 36 patients reported significant clinical improvements.

The rest of the patients did not mention any clinical improvements, but at the same time they did not report any disease progression.

21 patients out of the total 75 - their clinical improvements were confirmed by their respective physicians. 5 patients reported to have decreased their medication while 4 patients were able to completely discontinue their Parkinson's disease related medicine.

Positive reports regarding the decrease of motor Parkinsonism ( $N=29$ ) was reported by most of the patients which included the symptoms of tremor and rigidity. This eventually resulted in dexterity ( $\mathrm{N}=23$ ), improved speech ( $\mathrm{N}=24$ ), handwriting ( $\mathrm{N}=20$ ), swallowing ( $\mathrm{N}=20$ ) and most importantly - stability $(\mathrm{N}=19)$. 30 patients also reported an augmentation in self-motivation.

## MS- Results of stem Cell Treatment

Confirmation Improvement Parkinson
( $\mathrm{n}=33 / \mathrm{N}=75$ )

| Table: Number Of patient improvements by treating physician ( $\mathrm{n}=33 / \mathrm{N}=75$ ) |  |  |  |
| :--- | :---: | :---: | :---: |
|  | No doctor visited | Improvement confirmed by <br> own physician | Improvement not <br> confirmed by own <br> physician |
| My Parkinson <br> Improved significantly <br> stated by patient | $2(6.1 \%)$ | $4(12.1 \%)$ | 0 |
| My Parkinson <br> Improved by patient | $9(27.3 \%)$ | $17(51.5 \%)$ | $1(3.0 \%)$ |
| Total group <br> Parkinson patients | $11(33.4 \%)$ | $21(63.6 \%)$ | $1(3.0 \%)$ |
