Stem Cell Treatment Results of Autism

The statistics of 22 patients were taken after the stem cell treatment and it was wonderful to see that over 90% of the patients showed improvements.

10 years was the average age of the patients and 9.5 years was the median age. The oldest of the patients was of 16 years while the youngest one was of 5 years. There existed no positive correlation between the cells administered and the positive outcome.

Overall, most of patients experienced a lot of improvement in cognition, social contact, language, eye contact and coordination, motor skills and also consciousness.

Below is a summary of results in 6 patients who improved after treatment:

#Patient 1: Female, 15 years old
